

WHAT IS CLAIMED IS:

1. A method for inhibiting the action of TNF for treating neurological conditions in a human by administering a TNF antagonist for reducing the inflammation of neuronal tissue of said human, or for modulating the immune response affecting neuronal tissue of said human, comprising the step of:

a) administering a therapeutically effective dosage level to said human of said TNF antagonist selected from the group consisting of etanercept and infliximab for reducing the inflammation of neuronal tissue of said human, or for modulating the immune response affecting neuronal tissue of said human.

2. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said TNF antagonist is performed subcutaneously, intravenously, intrathecally, or intramuscularly.

3. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating neurological diseases and disorders.

4. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating neurological traumas and injuries.

5. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating acute spinal cord injury.

6. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating herniated discs.

7. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating spinal cord compression.

8. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating carpal tunnel syndrome (non-RA type).

9. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating pituitary adenoma.

10. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating primary or metastatic brain tumors.

11. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating chronic pain syndrome due to metastatic tumor.

12. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating increased intracranial pressure.

13. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating central nervous system lesions.

14. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating autoimmune neurological diseases.

15. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating multiple sclerosis.

16. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said dosage level is for treating inflammatory CNS diseases such as subacute sclerosing panencephalitis.

17. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said etanercept is performed subcutaneously in said human wherein said dosage level is in the range of 10mg to 50mg for acute or chronic regimens.

5 18. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said etanercept is performed subcutaneously in said human wherein said dosage level is 25mg for acute or chronic regimens.

19. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said etanercept is performed intramuscularly in said human wherein said dosage level is in the range of 25mg to 100mg.

20. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said etanercept is performed intravenously in said human wherein said dosage level produces a serum concentration in the range of 0.5 mg/mL to 50mg/mL.

21. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said etanercept is performed intravenously by infusion in said human wherein said dosage level produces a serum concentration of 10mg/mL.

22. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said infliximab is performed subcutaneously in said human wherein said dosage level is in the range of 0.1mg/kg to 2.5mg/kg.

5 23. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said infliximab is performed intramuscularly in said human wherein said dosage level is in the range of 0.1mg/kg to 2.5mg/kg for acute or chronic regimens.

24. A method for inhibiting the action of TNF in accordance with Claim 1, wherein the step of administering said infliximab is performed intravenously in said human wherein said dosage level produces a serum concentration in the range of 2.5mg/kg to 20 mg/kg.
